AGENDA

- 01 Introduction
- 02 What is Phishing?
- 03 Types of Phishing Attacks
- 04 Recognizing Phishing Emails
- 05 Fake Websites
- 06 Social Engineering
- 07 Real-World Example
- 08 Best Practices to Stay Safe
- 09 What to Do If You Are Phished
- 10 Interactive Quiz
- 11 Key Takeaways
- 12 Conclusion

WHAT IS PHISHING?

Phishing is a **cyberattack** where attackers trick you into revealing sensitive information such as **passwords, OTPs, credit card details** or **personal data** by pretending to be a trusted entity.

Impersonates
trusted entities

Steals sensitive
information

Causes financial
loss

Leads to identity
theft

TYPES OF **PHISHING** ATTACKS

EMAIL PHISHING

Fake emails sent to trick users into sharing sensitive information.

SPEAR PHISHING

Targeted attacks on specific individuals or organizations.

SMISHING

Phishing attacks delivered over SMS or text messages.

VISHING

Attackers use phone calls to manipulate victims for information.

CLONE PHISHING

A legitimate email is cloned and replaced with malicious links or attachments.

WHALING

Targeting high-profile executives or decision makers.

RECOGNIZING PHISHING EMAILS

From: support@secure-account.com

← Suspicious
Email Address

To: you@gmail.com

Subject: Urgent: Verify Your Account Now!

← Urgent
Language

Dear Customer,

Your account will be suspended within 24 hours!

Please click the link below to verify your account
and avoid suspension.

← Unexpected Attachment

WATCH OUT FOR:

Unknown sender

Urgent or threatening
language

Spelling and grammar
mistakes

Suspicious links or
attachments

Requests for personal
information

FAKE WEBSITES: SPOT THE DIFFERENCE

REAL WEBSITE

The screenshot shows a web browser window with the address bar displaying `https://www.bankofsecure.com`. The page title is "Bank of Secure". Below the title, there are two input fields: "Username" and "Password". At the bottom, there is a blue "Sign In" button.

HTTPS Connection

Correct URL

Valid SSL Certificate

FAKE WEBSITE

The screenshot shows a web browser window with the address bar displaying `http://www.bankofsecure-login.com`. The page title is "Bank of Secure". Below the title, there are two input fields: "Username" and "Password". At the bottom, there is a blue "Sign In" button.

No HTTPS Connection

Suspicious URL

Invalid SSL Certificate

SOCIAL ENGINEERING

Attackers manipulate human psychology to trick you into breaking normal security practices.

Common Techniques:

-  **Pretexting** (creating a false scenario)
-  **Baiting** (offering something tempting)
-  **Quid Pro Quo** (offering a service)
-  **Tailgating** (physical access)
-  **Emotional Triggers** (fear, urgency, curiosity, trust)

REAL-WORLD EXAMPLE

Google Docs Phishing Attack (2017)

Attackers sent fake Google Docs sharing emails that looked genuine.

-  Users received an email saying a document was shared with them.
-  Clicking the link asked for permission to access Google account.
-  Once access was granted, attackers could steal emails, contacts and sensitive data.

Impact: Over 1 Million users were affected.

Lessons Learned:

-  Always verify the sender.
-  Check the URL before clicking.
-  Avoid giving permissions to unknown apps.

BEST PRACTICES TO STAY SAFE

Verify the sender's email address before clicking.

Check URLs carefully before entering any information.

Never share passwords, OTPs or sensitive information.

Enable Multi-Factor Authentication (MFA) wherever possible.

Keep your software, browser and antivirus up to date.

Report suspicious emails to your organization.

WHAT TO DO IF YOU ARE **PHISHED**

DON'T PANIC

Stay calm and assess the situation.

DISCONNECT

Disconnect from the internet if possible.

CHANGE PASSWORDS

Change your passwords immediately.

SCAN DEVICE

Run a full security scan on your device.

REPORT IT

Report the incident to your IT team or platform.

ENABLE MFA

Enable Multi-Factor Authentication.

? INTERACTIVE QUIZ

Q1 What is the main goal of a phishing attack?

- A.** Steal money
- B.** Steal sensitive information
- C.** Damage computers
- D.** All of the above

Q2 Which of the following is a sign of a phishing email?

- A.** Personalized greeting
- B.** Spelling mistakes
- C.** Official company email
- D.** Correct website link

Q3 Should you share your OTP with anyone?

- A.** Yes, if they are from the bank
- B.** Never share OTP
- C.** Only with trusted people
- D.** Yes, if you requested it

Answers:

Q1-B

Q2-B

Q3-B

PHISHING ATTACK STATISTICS

91%

of cyber attacks
start with
phishing emails.

\$17,700

Average cost of a
phishing attack on
businesses.

3.4 BILLION

Phishing emails are
sent every day.

61%

Increase in phishing
attacks in the
last two years.

COMMON PHISHING RED FLAGS

Unknown
Sender

Urgent or
Threatening
Language

Suspicious
Links

Unexpected
Attachments

Requests for
Sensitive Info

Poor Spelling
& Grammar

When in doubt, don't click. **Verify!**

TOOLS THAT CAN HELP

**Google
Safe Browsing**

Check websites
URL & status.

VirusTotal

Analyze suspicious
files and URLs.

PhishTank

Database of
phishing sites.

**Have I Been
Pwned?**

Check if your info
was compromised.

**Two-Factor
Authenticator**

Add an extra layer
of security.

Use the right tools and **stay one step ahead** of attackers!

KEY TAKEAWAYS

- ✓ Phishing attacks are real and can happen to anyone.
- ✓ Stay alert and think before you click.
- ✓ Verify, don't trust.
- ✓ Follow best practices and use security tools.
- ✓ A small action today can protect you tomorrow.

Be Aware. Be Secure. Be Safe.

THANK YOU!

Stay Safe. Stay Secure.
